EZNote Review: We don't usually review apps, but since this one got recommended to me, I want to share some of my experiences. EZNote is an alarm and time manager for Windows. It supports notes, multiple alarms and the ability to snooze and cancel tasks. The interface is clean and simple and the security for entering passwords or keywords is very good, so you don't have to worry about having passwords or secret words lying around in plain sight. You can also set up a reminder in the main window when something comes up. That's a nice addition that I don't normally use on my PC, because of the extra workload and constant checking that comes along with it. Overall, EZNote is an excellent tool that is well worth the \$9.99 price for the download. From an early age, I've been fascinated by the wonders of technology and the weird and sometimes really unsettling stuff the web is up to. That's what motivates me to keep on writing about online things. Comments (1) What a lousy alarm application! Unfortunately, I purchased this application and am very disappointed. When you add an alarm, it DOES not show up or notify you to do so. This is not the promised function of this application. Due to the fact that I did not receive any notifications, I need to post this comment in order to know that there is a bug in this application or maybe the application is a scam. Unfortunately, it is not possible to generate a real notifications. There is no such possibility, and it was definitely not advertised as such. This application is a scam! My decision: I will be removing this application from my computer immediately, and will never use this application again. Furthermore, I would be happy to receive comments and suggestions about the removal of this application from my computer. For your convenience, here are the removal instructions: Close the program and delete the program from your computer. Go to the EZNote installation folder and delete the program from there.
