Latest news for Visual Typewriter 1.5 - Visual Typewriter 1.5 License Key - VTY 1.5 Latest news for Visual Typewriter 1.5 - Visual Typewriter 1.5 License Key - VTY 1.5Q: jQuery.on() method and nth child selector: Why does event from nth child disappear? I am designing a basic quizzes application. Questions are loaded from a CSV file and are styled with CSS. I am using a jQuery.on() method to capture click events on all questions. When I click on an answer, a hidden field is displayed, and a click handler is used to set the value of that hidden field. This seems to work as expected. The problem: If I click on the same question twice in a row, the answer displayed disappears. This is the same for subsequent questions. So if I click on question 1, and then click on question 2, I can no longer click on question 1 to display the hidden field for question 2. It appears that after the second click on the same question, the.on() event handler is no longer called. I used Chrome's console to verify this, and the event handler is called for the first click and then 3e33713323
