Cracking Adobe Photoshop is a bit more involved, but it can be done. First, you'll need to download a program called a keygen. This is a program that will generate a valid serial number for you, so that you can activate the full version of the software without having to pay for it. After the keygen is downloaded, run it and generate a valid serial number. Then, launch Adobe Photoshop and enter the serial number. You should now have a fully functional version of the software. Just remember, cracking software is illegal and punishable by law, so use it at your own risk.

Sharpening, Exposure, Color, and the Camera Model Parameter

As you zoom in to an area of your image, you'll notice that the noise pattern is rather sharply defined. No matter what area I'm looking at, the noise pattern looks sharper just beneath the Curves adjustment layer than in areas that have no adjustment layer. The reason for this is that the sharpening has taken place precisely at the location where the Curves adjustment layer is active. My understanding is that this is a new behavior in Photoshop CS6. In Photoshop CS5, sharpening applied at any location gave a fuzzy, textured appearance. I understand why the previous version didn't operate this way, but it certainly is caused by sharpening being applied at the exact location of the Curves adjustment layer. The result is that turning off the layer does not produce a sharpened area. This behavior seems to replicate the look of a raw JPG file. However, if you keep the Sharpening and Curves adjustment layers active, you can use them to achieve the effect of a JPG image that's been sharpened using the camera RAW converter. This may be the best option if you have a specific RAW capture being used to generate a JPG file. But I don't find it ideal. Another interesting phenomenon is that if you toggle the Exposure adjustment layer on or off, you get a series of large, bright vertical lines in your image that fan out from the top. It's like there's a hidden, oversaturated layer at the top of the image that's being manipulated by the Curves or Sharpening adjustment layers. Again, the subjects in your image are fine, but the effect is quite striking.
